

git'n crazy

Or for a less lame and silly name: “git fundamentals”

The basics

- The repo
- The working tree
- The objects
- The index
- The commit

The repo

- Can be local only
- `git init`

Objects

- blobs
- trees
- commits
- tags
- *ish

more on objects

for the curious

- `git ls-tree`
- `git cat-file -t`
- `git cat-file blob sha1`

The commit

- Parent
- Tree
- author
- comitter
- message

A practical example

```
$ git show —format=raw
```

```
commit 0000002cc9531c22035f36af85176c686abae2d8
```

```
tree 0feacab8165403bbc4ddd7b1b355a28b7b10c63a
```

```
parent 000000fc1d31caa6293c2a66a5a92538c5862c6a
```

```
author CTF user <me@example.com> 1391022630 +0000
```

```
committer CTF user <me@example.com> 1391022630 +0000
```

```
    Give me a Gitcoin
```

```
    8ChbUECyn9BdzJNl
```

```
diff --git a/LEDGER.txt b/LEDGER.txt
```

```
index fe458e8..4b0656c 100644
```

Ancestry References

- `git show HEAD^`
- `git show HEAD^^`
- `git show HEAD~4`
- `HEAD^2` for merges
- `git show master@{yesterday}`

Working with the history

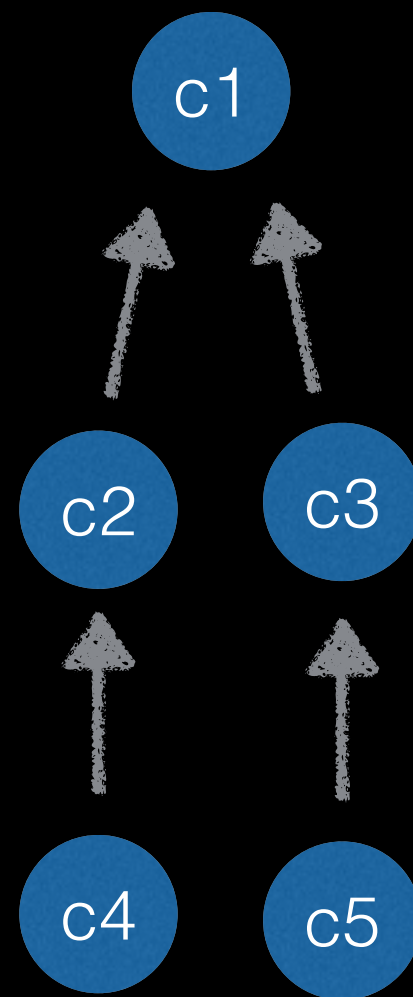

- Each commit references
 - its parent
 - its tree
- We can review the entire history of a particular commit

git log

- `git log`
- `git log tree-ish`
- `git log *ish...*ish`
- `git log -u`
- `git log —format`

Commit Ranges

- `git log master..experiment`
- `git log experiment..master`
- `git log origin/master..HEAD`
- `$ git log refA..refB`
- `$ git log ^refA refB`
- `$ git log refB --not refA`
- `git log master...experiment`

Working with remotes

- `$ git remote -v`

origin lvl1-gmgk2yiw@stripe-ctf.com:level1 (fetch)

origin lvl1-gmgk2yiw@stripe-ctf.com:level1 (push)

Working with remotes

- `git fetch origin`
- `git merge origin master`
- `git pull`

man is your friend

- seriously don't be scurred
- man gittutorial
- man gittutorial-2
- man gitcore-tutorial

So you're actually frightened of man?

(HTML docs)

- open `/usr/local/Cellar/git/1.8.4.2/share/doc/git-doc/index.html`

1. The Git User's Manual

1. `git-htmldocs/user-manual.html`

2. Everyday Git with 20 Commands

1. `git-htmldocs/everyday.html`
